

CRUZ, SAMANTHA D.

BSIT 4-5

After reading Bill Joy's "Why the Future doesn't need us", I appreciate how clearly he explains the ethical challenges posed by technologies like AI, nanotech, and genetic engineering, warning that unchecked advancements could threaten the humanity. While I find his suggestion to slow technological progress too pessimistic, his concern about the risk of rapid innovation highlights the need for responsible development rather than immediate gains. Overall, Joy's essay is a crucial wake-up call, urging leaders and innovators to create policies that maximize technology's benefits while avoiding its worst dangers.
